## **POWER ENGINEERING & MANUFACTURING LATEST CAREER CENTER PARTNER**

**WATERLOO**—This week a signing ceremony committed Power Engineering & Manufacturing (PEM) as a sponsor of the Waterloo Career Center (WCC). The Waterloo-based company specializes in the custom design and manufacturing of HEAVY DUTY gear boxes.

“Power Engineering & Manufacturing, Ltd. is excited to partner with the Waterloo Career Center and the Advanced Manufacturing program. We are looking forward to getting kids exposed and interested in the engineering and manufacturing world! These kids, born and raised right here in the Cedar Valley, will be Iowa's future workforce if we can show them that they can make a good living right here at home, and have a career where they can build something and take pride in what they accomplish every day,” said Dennis Schilling, Power Engineering & Manufacturing President.

PEM will complement the Advanced Manufacturing pathway at the WCC, where students get a comprehensive, hands-on overview of manufacturing processes and career choices. Students

work with cutting-edge technology, including high-level CADD programming like Innovator, 3-D Printers, CNC machinery, plasma cutters and welding components.

“We are happy and grateful to sign Power Engineering and Manufacturing as our next official sponsor. They have already been at the table, helping us do the work and supporting our students. We are very excited to make the partnership official,” said Dr. Jane Lindaman, Waterloo Schools Superintendent.
